
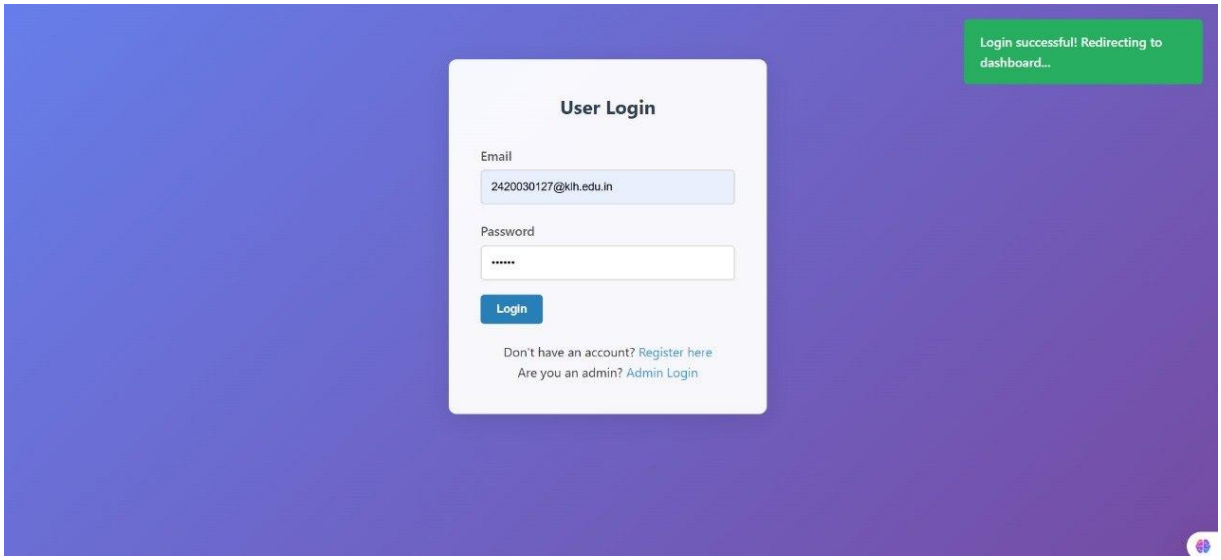
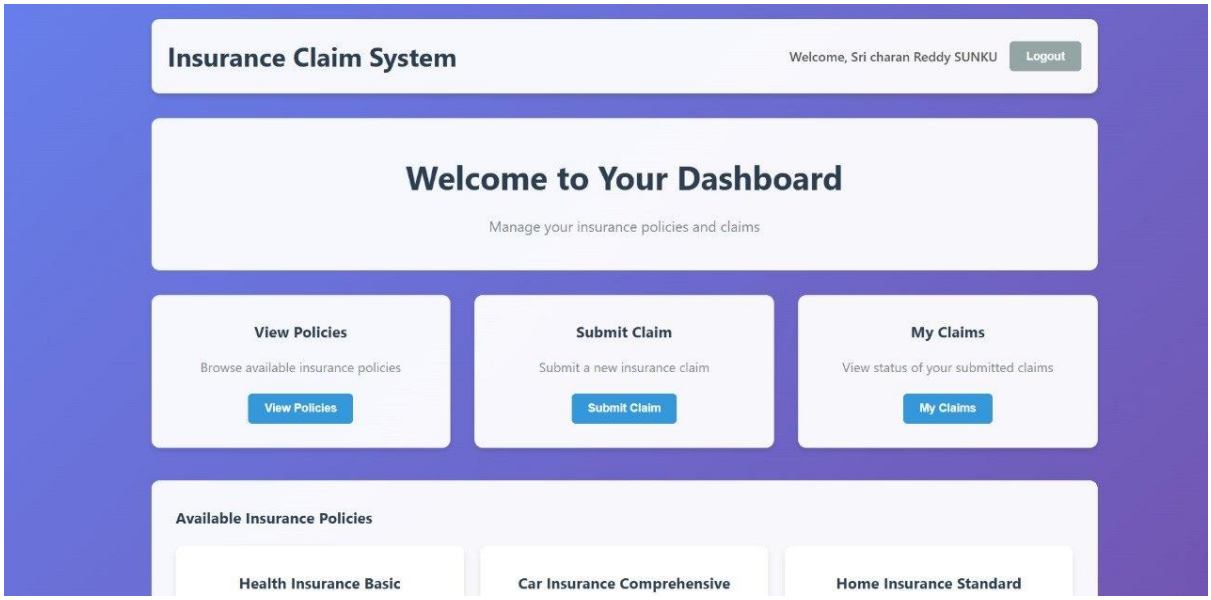
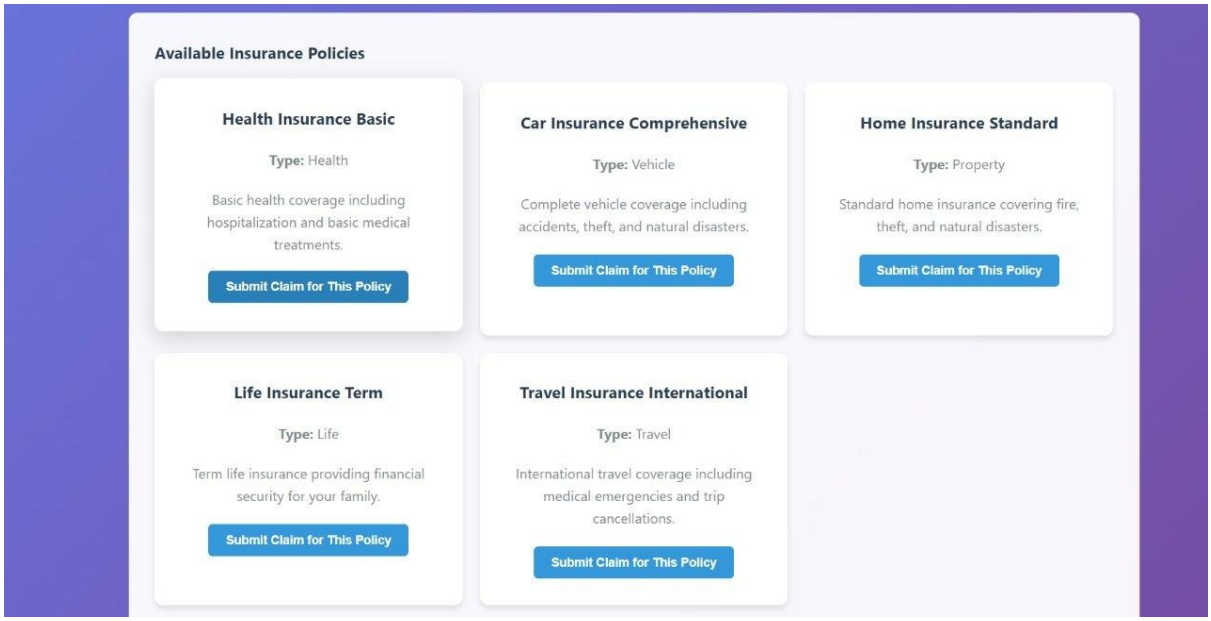
1. **User Registration Page:**
   The User Registration page allows new users to create an account in the Insurance Claim System. It collects essential user information such as name, email, and password. The system validates the input fields to ensure data accuracy and security. Once registered successfully, the user can log in and access the dashboard to manage insurance policies and claims.



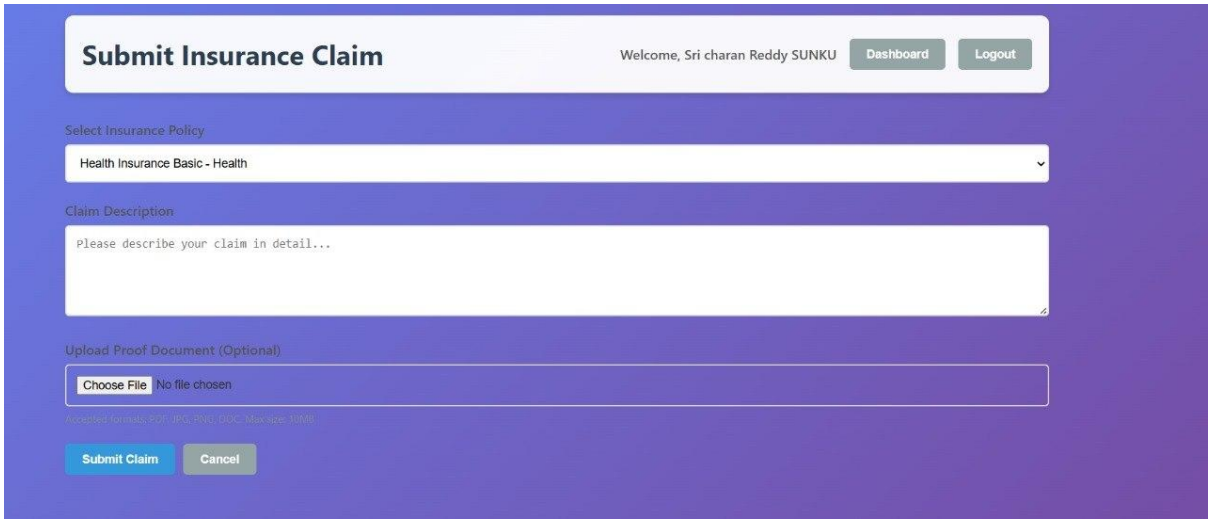
2. **User Login Page:**
   This page provides authentication for users to access the Insurance Claim System. It ensures secure login using email and password validation. Upon successful login, users are redirected to their personalized dashboard.



3. **User Dashboard**:
   The user dashboard acts as the main interface where users can manage their insurance activities. It provides quick access to available policies, claim submission, and tracking of previously submitted claims.

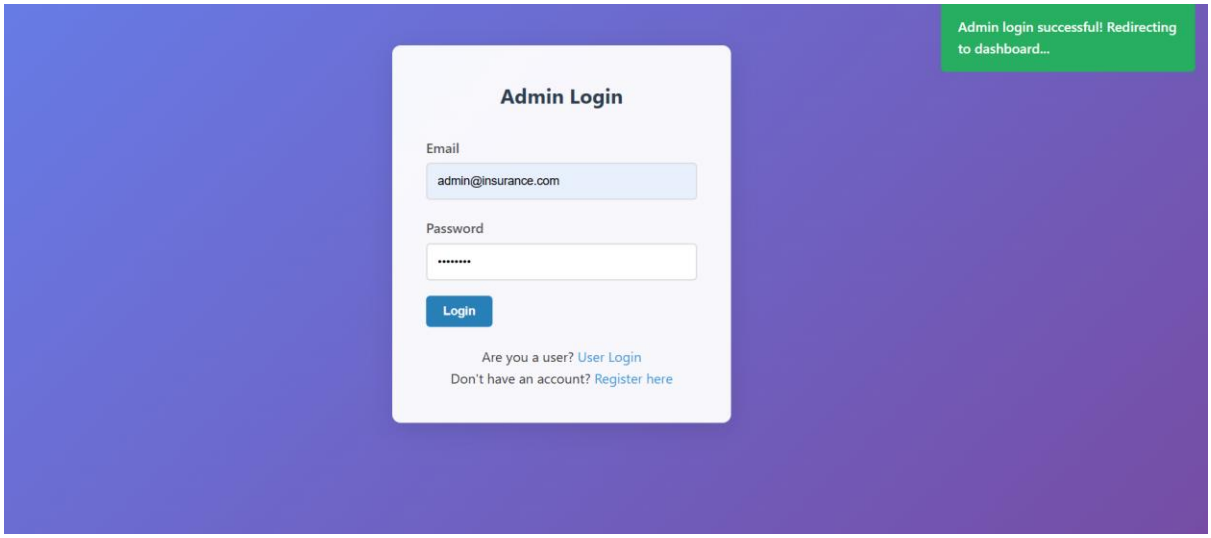


4. **Available Insurance Policies:**
   This section displays all available insurance policies. Users can explore different insurance options and directly initiate a claim for a selected policy.

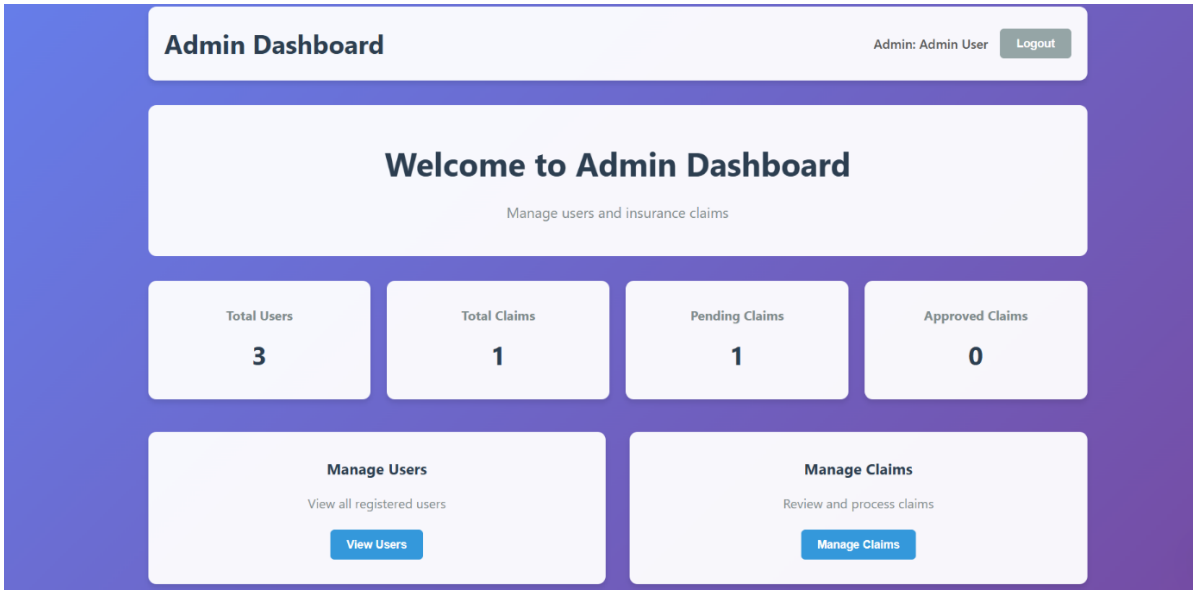


5. **Submit Insurance Claim Page:**
   This page allows users to submit a new insurance claim by selecting a policy, providing claim details, and uploading supporting documents. The system validates input before submission.

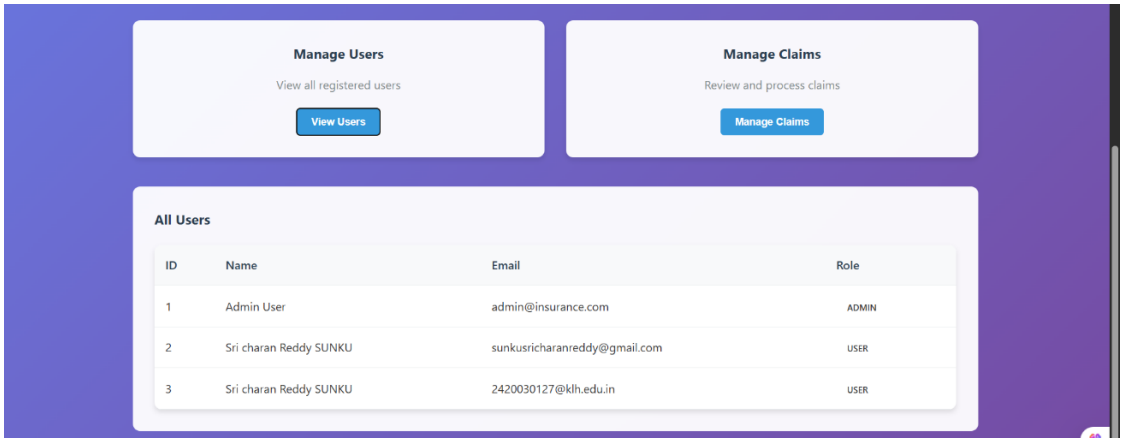
6. **My Claims (User Claim History):**
   This section displays all claims submitted by the user along with their current status. Users can track progress and view uploaded documents.



7. **Admin Login Page:**
   The Admin Login page provides secure access for administrators of the Insurance Claim System. It verifies admin credentials using email and password. Only users with ADMIN roles are allowed to log in through this interface. Upon successful authentication, the system displays a success message and redirects the admin to the dashboard.

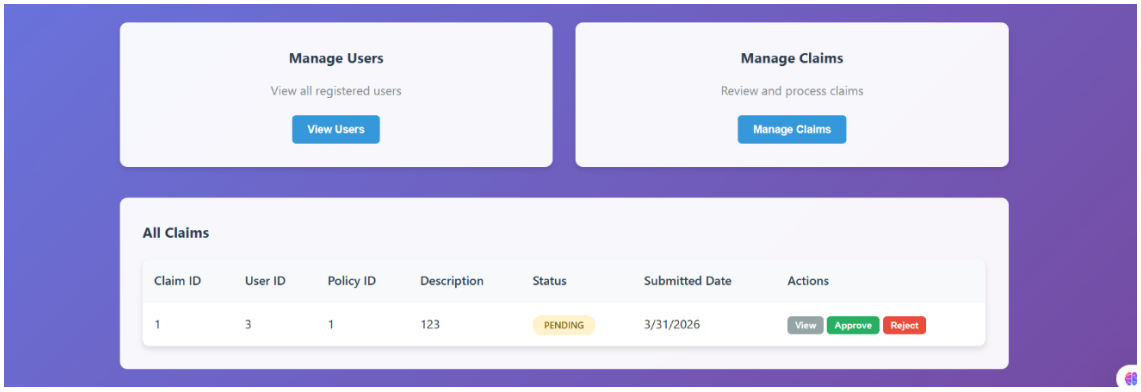


8. **Admin Dashboard**:
   The admin dashboard provides an overview of system statistics and enables administrators to manage users and insurance claims efficiently.



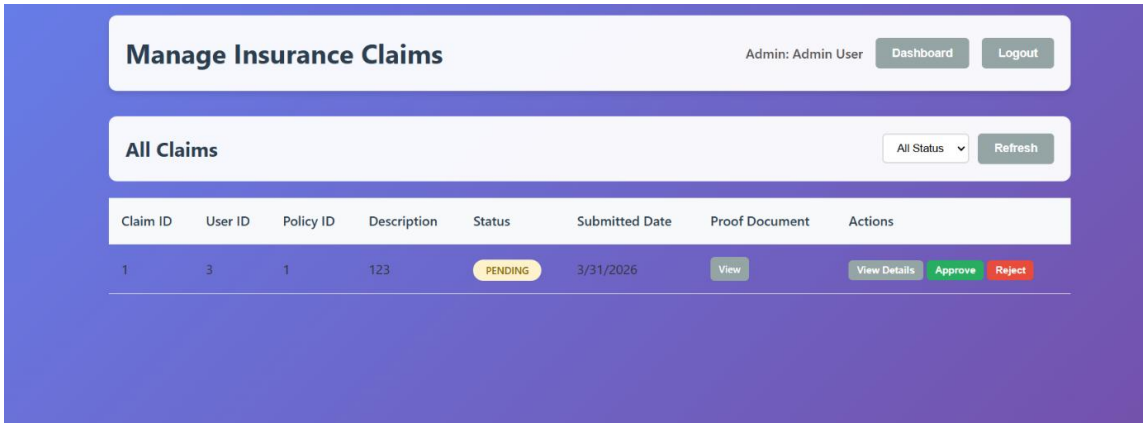
9. Manage Users (Admin):

This section allows the administrator to view all registered users and their roles. It helps in monitoring and managing user access within the system.



10. Manage Claims (Admin View):

This page enables the admin to review all submitted claims. The admin can approve or reject claims based on the provided details and supporting documents.



11. Claim Processing Page (Detailed Admin View):

This interface allows administrators to process claims in detail. It supports filtering claims by status and provides document verification before making decisions.

12. Database – Users Table:

The users table stores all registered users in the system. It includes login credentials and role information. The role field differentiates between administrators and regular users, enabling role-based access control.

Database – Claims Table:

The claims table stores all insurance claims submitted by users. It maintains details such as claim description, associated policy, uploaded proof documents, and current status. The timestamps help track claim submission and updates.
